

ACR<sup>TM</sup>  
SEALANTS

INNOVATION. **PROTECTION.** *SUSTAINABILITY.*

**ACR Alchemco Clean & Repair** is our complete line of accessory and system compatible products. It offers products designed to enhance the waterproofing systems. ACR's Alchemco Clean & Repair line includes accessory and system-compatible products, all designed to complement the waterproofing systems and enhance overall performance.

Alchemco offers two advanced sealants for concrete protection. The ACR® PolySeal Sealant S+ is a high-build silicone rubber sealant that provides long-term protection against weathering, UV radiation, and temperature extremes, working seamlessly with the TechCrete® 2500 Waterproofing System. The ACR® PU24 Elastomeric Sealant is a flexible polyurethane sealant that forms a watertight seal for moderate cracks and control joints, suitable for both horizontal and vertical applications. Both products are non-toxic once cured and designed for easy application. These sealants enhance the durability and resilience of concrete surfaces, ensuring long-lasting protection.

1

### ACR PolySeal Sealant S+

Single component solvent free, moisture-curing high-build liquid silicone rubber sealant that is designed for use on concrete surfaces to work in conjunction with the Alchemco Waterproofing Systems.

#### Key Benefits

provides long-term protection against:

- weathering, aging, temperature extremes
- oxidation
- wind-driven sand
- rain and snow
- the effects of ozone
- ultraviolet radiation

2

### ACR PU24 Elastomeric Sealant

Low modulus high performance polyurethane sealant, which cures on adsorption of atmospheric moisture to form a firm and flexible rubber watertight seal for moderate cracks and control joints

#### Key Benefits

- Highly resilient with excellent recovery
- Provides permanent & uniform watertight seal
- Excellent adhesion to most substrates
- Weather resistant
- Non-biodegradable & Non-toxic once cured
- Easy to apply, no mixing required
- Over painting can be done with dispersion based paint (acrylic, vinyl)

3

### Complete Tailored Systems

Alchemco understands every concrete structure is different. We cater our systems to fit your concrete to protect better and longer.

## ENZYME MODIFIED SUBSURFACE WATERPROOFING

Alchemco is revolutionizing the concept of 'long-term' concrete waterproofing solutions. Structures with a lifespan of 50-100 years deserve more than 5-10 years of product protection. We are setting industry standards with technology that ensures sustainability and reliability for decades, not just years.

Our Waterproofing Systems are specified by the best Architects & Engineers and applied by professional factory-trained and certified Contractors supervised by Alchemco's Field Technical Team.
