

ACRTM
FLASHINGS

INNOVATION. **PROTECTION.** *SUSTAINABILITY.*

ACR Alchemco Clean & Repair is our complete line of accessory and system compatible products. It offers products designed to enhance the waterproofing systems. ACR's Alchemco Clean & Repair line includes accessory and system-compatible products, all designed to complement the waterproofing systems and enhance overall performance.

Alchemco offers two advanced flashing products for concrete protection. The ACR® PU44 Liquid Flashing is a water-based hybrid liquid rubber with synthetic micro-reinforcement, designed to eliminate blistering and wrinkling without needing reinforcing fabric. It creates a fully bonded, seamless membrane that resists UV and temperature extremes, remaining flexible over time. The ACR® PolyMembrane Flashing is a solvent-free, moisture-curing silicone rubber flashing that provides long-term protection against weathering, UV radiation, and temperature extremes. With high solids content, it can be applied thickly without blistering and adheres well to vertical surfaces. Both products ensure durable, reliable sealing for concrete structures.

1

Polymembrane Flashing

Single component solvent free, moisture-curing liquid silicone rubber flashing material designed for use on concrete surfaces

Key Benefits

Provides long-term protection against:

- weathering, aging, temperature extremes
- oxidation
- wind-driven sand
- rain and snow
- the effects of ozone
- ultraviolet radiation

2

PU 44 Liquid Flashing

PU44 is a water-based hybrid liquid rubber flashing with integral synthetic micro reinforcements. PU44 is not affected by UV or temperature extremes & will not become brittle with age.

Key Benefits

- does not require the use of polypropylene, polyester or chopped strand glass fiber reinforcing fabric
- provides a fully bonded homogeneous membrane barrier with no laps, joints or over-flashings
- not affected by UV or temperature extremes
- will not become brittle with age

3

Complete Tailored Systems

Alchemco understands every concrete structure is different. We cater our systems to fit your concrete to protect better and longer.

ENZYME MODIFIED SUBSURFACE WATERPROOFING

Alchemco is revolutionizing the concept of 'long-term' concrete waterproofing solutions. Structures with a lifespan of 50-100 years deserve more than 5-10 years of product protection. We are setting industry standards with technology that ensures sustainability and reliability for decades, not just years.

Our Waterproofing Systems are specified by the best Architects & Engineers and applied by professional factory-trained and certified Contractors supervised by Alchemco's Field Technical Team.
