

enDuratite™
MLASTIC

DEFENSE. ELEVATED.

enDuratite™ Mlastic is a multisystem compatible cementitious coating used for tailored waterproofing protection. **MLastic** can be used independently for maintenance and repair without full system requirements or to compliment as an accessory of an Alchemco Waterproofing System. **enDuratite Mlastic** is extremely versatile , delivering fast application and provides durability to just about any concrete project.

Alchemco offers a variety of specialized products for concrete and surface protection. enDuratite MLastic Coating is a one-component, cementitious waterproofing coating with flexibility to handle temperature-induced movement. By simply adding water, the powder transforms into a high-quality coating suitable for concrete and masonry surfaces. It forms a watertight barrier that adheres well, is vapor-permeable, and offers excellent freeze thaw durability. Utilizing cross-linking polymer technology and Ethylene Vinyl Acetate, it improves performance over time with UV exposure. The coating is nonflammable, low in VOC content, and resistant to salts and carbonation, making it suitable for various applications including immersion and underground use.

enDuratite MLastic Coating

1

One-component, cementitious waterproofing coating that has been designed to have some flexibility with movement from heat and cold. With the simple addition of water, enDuratite MLastic Coating powder transforms into a high quality coating system. enDuratite MLastic Coating is designed to be applied over concrete and masonry surfaces.

Key Benefits

2

- Flexible
- Low VOC content
- Bonds to damp surfaces (no primer required)
- One part (just add potable water)
- Suitable for immersion and underground applications.
- Positive pressure to 230 ft (70 m), head pressure (.69 MPa). Negative pressure to 82 ft (25 m), head pressure (.245 MPa).
- Resistant to salts and carbonation
- Increases resistance of substrate to deicing salts.
- Superior abrasion resistance.
- Nonflammable; low odor.
- Easily applied to clean, sound substrates.
- May be over coated

3

Complete Tailored Systems

Alchemco understands every concrete structure is different. We cater our systems to fit your concrete to protect better and longer.

ENZYME MODIFIED SUBSURFACE WATERPROOFING

Alchemco® is revolutionizing the concept of 'long-term' concrete waterproofing solutions. Structures with a lifespan of 50-100 years deserve more than 5-10 years of product protection. We are setting industry standards with technology that ensures sustainability and reliability for decades, not just years.

Our Waterproofing Systems are specified by the best Architects & Engineers and applied by professional factory-trained and certified Contractors supervised by Alchemco's Field Technical Team.
